

# Contents

## **1 Introduction and Installation**

- 1.1 What is Julia and Why Julia?
- 1.2 Julia in the Cloud: JuliaBox
- 1.3 Installing Julia
  - 1.3.1 Installing Gurobi
  - 1.3.2 Installing Julia in Windows
  - 1.3.3 Installing Julia in Mac OS X
  - 1.3.4 Running Julia Scripts
  - 1.3.5 Installing CPLEX
- 1.4 Installing IJulia
- 1.5 Package Management
- 1.6 Helpful Resources

## **2 Simple Linear Optimization**

- 2.1 Linear Programming (LP) Problems
- 2.2 Alternative Ways of Writing LP Problems
- 2.3 Yet Another Way of Writing LP Problems
- 2.4 Mixed Integer Linear Programming (MILP) Problems

## **3 Basics of the Julia Language**

- 3.1 Vector, Matrix, and Array
- 3.2 Tuple
- 3.3 Indices and Ranges
- 3.4 Printing Messages
- 3.5 Collection, Dictionary, and For-Loop
- 3.6 Function
- 3.7 Scope of Variables
- 3.8 Random Number Generation
- 3.9 File Input/Output
- 3.10 Plotting
  - 3.10.1 The `PyPlot` Package
  - 3.10.2 Avoiding Type-3 Fonts in `PyPlot`
  - 3.10.3 The `Gadfly` Package

- 4 Selected Topics in Numerical Methods**
  - 4.1 Curve Fitting
  - 4.2 Numerical Differentiation
  - 4.3 Numerical Integration
  - 4.4 Automatic Differentiation
  
- 5 The Simplex Method**
  - 5.1 A Brief Description of the Simplex Method
  - 5.2 Searching All Basic Feasible Solutions
  - 5.3 Using the `MathProgBase` Package
  - 5.4 Pivoting in Tableau Form
  - 5.5 Implementing the Simplex Method
    - 5.5.1 `initialize(c, A, b)`
    - 5.5.2 `isOptimal(tableau)`
    - 5.5.3 `pivoting!(tableau)`
    - 5.5.4 Creating a Module
  - 5.6 Next Steps
  
- 6 Network Optimization Problems**
  - 6.1 Minimal-Cost Network-Flow Problem
  - 6.2 Transportation Problem
  - 6.3 Shortest Path Problem
  - 6.4 Implementing Dijkstra's Algorithm
  
- 7 General Optimization Problems**
  - 7.1 Unconstrained Optimization
    - 7.1.1 Line Search
    - 7.1.2 Unconstrained Optimization
    - 7.1.3 Box-constrained Optimization
  - 7.2 Convex Optimization
  - 7.3 Nonlinear Optimization
  - 7.4 Nonconvex Nonlinear Optimization
  - 7.5 Mixed Integer Nonlinear Programming
  
- 8 Monte Carlo Methods**
  - 8.1 Probability Distributions
  - 8.2 Randomized Linear Program
  - 8.3 Estimating the Number of Simple Paths
  
- 9 Lagrangian Relaxation**
  - 9.1 Introduction
    - 9.1.1 Lower and Upper Bounds
    - 9.1.2 Subgradient Optimization
    - 9.1.3 Summary
  - 9.2 The  $p$ -Median Problem
    - 9.2.1 Reading the Data File

- 9.2.2 Solving the  $p$ -Median Problem Optimally
- 9.2.3 Lagrangian Relaxation
- 9.2.4 Finding Lower Bounds
- 9.2.5 Finding Upper Bounds
- 9.2.6 Updating the Lagrangian Multiplier

## **10 Parameters in Optimization Solvers**

- 10.1 Setting CPU Time Limit
- 10.2 Setting the Optimality Gap Tolerance
- 10.3 Warmstart
- 10.4 Big  $M$  and Integrality Tolerance
- 10.5 Turning off the Solver Output
- 10.6 Other Solver Parameters

## **11 Useful and Related Packages**

- 11.1 Basic Math
- 11.2 Mathematical Programming
- 11.3 Graph and Network
- 11.4 Heuristics
- 11.5 Statistics and Machine Learning

## **Index**
